

Access your health records securely online.

You and your doctors now have secure access to your Shared Health Clinical Health Record™. Shared Health enables doctors and other health care providers to get a clear picture of your medical history in order to provide more accurate, safer care.

Shared Health meets all HIPAA privacy requirements, and incorporates the same encryption technology used for online banking.

You can also access your own Clinical Health Record and view the same information as your doctors. To register, simply visit www.sharedhealth.com. And, don't forget to let your doctors know that you have a Clinical Health Record through Shared Health.
