Lab Panel - Rebundle

If all components of a disease or organ panel are reported separately, the individual component codes will be replaced with the single organ or disease panel code.

New Patient Replacement

If a new patient evaluation and management code is filed on a patient who has had a new patient evaluation and management code filed by the physician or another physician of the same specialty who belongs to the same group within the past three years; clinical editing will replace the new patient evaluation and management code with an established patient evaluation and management code as supported by CPT.

Rebundle

If all components of a global procedure are reported separately, the individual component codes will be replaced with the single global procedure code. This also includes individual components reported in addition to the global procedure code.
