72070	72090	Reversed NCCI	72090 includes two anteroposterior views, one of the thoracic spine, and one of the lumbar spine, to assess the areas and degrees of curvature. No lateral views are obtained in 72090, since 72090 is used to assess scoliosis in the coronal plane, not sagittal, but as it includes an assessment of the thoracic spine, 72070 is considered a subset of 72090. There may be instances where both would be reported on the same day, but medical records should be reviewed before allowing both codes to see what the indications were.
