Healthcare Effectiveness Data and Information Set (HEDIS®) Measures

One measure we collect for the National Committee for Quality Assurance (NCQA) evaluates the appropriate use of imaging studies for uncomplicated low back pain (LBP). A higher percentage on this measure indicates better performance. This measure evaluates the percentage of members ages 18 to 75 diagnosed with LBP who:

›   Haven't received a prior diagnosis of LBP in the past six months

›   Haven't had imaging studies within the first 28 days of diagnosis (includes X-ray, MRI and CT scans)

Accurate Coding is Key

When treating a patient with low back pain (LBP), it's important to document and code for any exclusions that would warrant use of imaging studies. Patients with a diagnosis of uncomplicated LBP should wait 28 days or more after receiving a primary diagnosis before they undergo an imaging study (plain X-ray, MRI, or CT scan). **Below are categories and codes for HEDIS exclusions:**

Principle Diagnosis ›   **No Red Flags** ›   Imaging Performed withing 28 days of diagnosis ›   (!) Non-Compliant

Uncomplicated back pain   (e.g. cancer, recent trauma, etc.)

Principle or Secondary Diagnosis ›   Positive for red flag exclusions ›   Imaging Performed ›   (✓) OK

Uncomplicated back pain

Secondary Diagnosis › › › › › ›   Imaging Performed ›   (✓) OK

Uncomplicated back pain

> **Helpful Tip**
>
> Include documentation and coding, along with the diagnosis of LBP on the claim, for "red flag" conditions (exclusions) where an imaging study should be ordered. This will prevent an open gap that can't be closed.

Alternative Treatments

Before ordering imaging for your patient, you may encourage patients to try basic treatments such as:

› Ice

› Heat

› Over-the-counter pain relief

› Stretching or back straightening exercises

› Safe back habits

When Imaging is Necessary

It's important to document and code for any exclusions that would warrant use of imaging studies. Below are categories and codes for HEDIS exclusions:
