CMS has added two statin measures to the star ratings program: **statin therapy in persons with cardiovascular disease** and **statin use in persons with diabetes**. These measures are focused on two of the major statin benefit populations described in the American College of Cardiology/American Heart Association guidelines and align with recommendations from the American Diabetes Association. **Both statin prescribing measures recommend statin therapy for people with either cardiovascular disease or diabetes regardless of cholesterol levels.**

The comparison chart below helps to highlight the differences between the three statin prescribing measures in the CMS Star Ratings programs for Medicare Advantage plans.

### Statin Star Measures Comparison Chart

<table>
<thead>
<tr>
<th>Measure</th>
<th>Adherence (Statins) 3-weight</th>
<th>Cardiovascular Disease (SPC) 1-weight</th>
<th>Diabetes (SUPD) 1-weight</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Criteria to Meet Measure</strong></td>
<td>Prescription claims for a statin to cover 80% of the year</td>
<td>One prescription claim for a moderate to high intensity statin</td>
<td>One prescription claim for a statin</td>
</tr>
<tr>
<td><strong>Inclusion Criteria</strong></td>
<td>Two prescription claims for a statin medication</td>
